🌐 lattes.cnpq.br/3280302693405113

Backend and platform engineer, 26 years in production. Co-owns a production ML platform for automated issue triage and duplicate detection – FastAPI over Kafka, Milvus vector search and Snowflake on Kubernetes/AWS EKS – and delivers internal platforms from data model to deploy: team onboarding (Django/GraphQL/Celery), an engineering-metrics platform with nine CI-fed dashboards, and AI developer tooling on the Claude Agent SDK and MCP. Earlier: Python backend services on JSON:API contracts with CI/CD and Sentry ownership, and technical lead for Scrum teams of 6 to 15 engineers. M.Sc. in Computer Science (Artificial Intelligence).

SKILLS

BACKEND

Expert

Python, Django, FastAPI, Flask, Falcon, GraphQL, Strawberry GraphQL, REST API, JSON:API, Celery, Kafka, WebSockets, PHP, Yii, Laravel, Ruby on Rails, Java

FRONTEND

Advanced

JavaScript, TypeScript, VueJS, NuxtJS, PrimeVue, Tailwind CSS, Pinia, EmberJS, Backbone/Marionette, SCSS/SASS

AI & ML ENGINEERING

Advanced

LLM application development, Model Context Protocol (MCP), Claude Agent SDK, Agentic tooling, Vector search, Milvus, Snowflake

DEVOPS & CI/CD

Expert

CI/CD, Jenkins, TeamCity, GitLab CI, Docker, Multi-arch builds, Ansible, HashiCorp Vault, Sealed Secrets, uv, prek, ruff, pytest, Git, GitFlow

CLOUD & ORCHESTRATION

Advanced

Kubernetes, Helm, Kustomize, AWS EKS, AWS, Google Cloud, mTLS, OAuth 2.0, Sentry

DATABASES

Advanced

PostgreSQL, MySQL, Oracle, Redis, Milvus, Snowflake

PROCESS & LEADERSHIP

Expert

Software Configuration Management, CMMI, SCAMPI appraisal, Scrum, Kanban, Technical Leadership, Code Review, Mentoring

Principal Technical Manager · Backend & Platform Engineering

Jan 2026 - Present

CESAR (Centro de Estudos e Sistemas Avançados do Recife) · Recife, PE, Brazil

Backend and platform engineering for ML-driven developer-productivity systems: shared ownership of a production ML platform, two internal platforms and two real-time team apps, AI/LLM developer tooling, and quality programs across five repositories. Kubernetes deployments authored as Helm charts, with Kustomize overlays.

- Shared ownership of a production ML platform for automated issue triage and duplicate detection: FastAPI, Kafka, Milvus vector search, Snowflake, Kubernetes on AWS EKS.
- Developed a team onboarding platform (Django 6, GraphQL, Celery, Kubernetes) that automates a manual nine-step process, with progress tracking, user notifications and update triggers.
- Developed an engineering-metrics platform (Django + GraphQL, Nuxt 4, PostgreSQL on Kubernetes) with nine dashboards over coverage, LOC, pull-request and bug-fix data from CI.
- Developed a self-service web app that triggers metric collection on demand with live log streaming, plus weekly Kubernetes CronJobs covering three repositories.
- Delivered AI developer tooling: an autonomous Claude Agent SDK bug-fixer that opens pull requests behind a confidence gate, and an MCP server serving six triage tools to Claude Code, Cursor and Xcode.
- Delivered two real-time team apps: planning poker on Django Channels WebSockets, and retrospectives on GraphQL with a six-state workflow engine.
- Raised test coverage across five repositories – one from 0% to ~80% by authoring its entire test suite, the other four from roughly 50% to ~80% – and wired coverage reporting into CI.
- Standardized the Python toolchain across the same five repositories: Poetry to uv, pre-commit to prek, plus ruff and type-check gates.

Senior Technical Manager · PHP & Python Backend Services

Oct 2022 - Dec 2025

CESAR (Centro de Estudos e Sistemas Avançados do Recife) · Recife, PE, Brazil

Backend services for four concurrent web platforms – two client applications and CESAR's two institutional systems – standardized on JSON:API response contracts and backed by end-to-end CI/CD ownership with automated quality gates.

- Built and maintained backend services for two client web applications in Python (Django and Flask).
 - Built and maintained CESAR's two institutional platforms alongside them: the portfolio system (Laravel 9 API, Nuxt 2 front end) and, from 2024, the surveys system (Flask 3 API with SQLAlchemy, Redis caching, scheduled jobs and Swagger docs, Nuxt 3 front end).
 - Designed and implemented REST APIs to the JSON:API specification across both stacks, standardizing response contracts and reducing integration rework between backend and frontend squads.
 - Owned CI/CD end to end for all four platforms (Docker, Git/GitFlow, Jenkins) – automated build, test and deploy, with formatting, lint and test gates enforced in CI.
 - Ran Sentry error monitoring across three of the four platforms, on two separate instances – a client's and CESAR's – creating projects per environment and instrumenting both frontend and backend applications.
 - Authored the entire backend unit and integration test suites for the two client applications, reaching ~50% coverage on one and ~98% on the other.
-

Senior Technical Manager · Full-Stack Delivery & Technical Leadership

Jun 2013 – Sep 2022

CESAR (Centro de Estudos e Sistemas Avançados do Recife) · Recife, PE, Brazil

Nine years across four client projects: four production web applications in four language stacks, the CI/CD environments behind them, and technical direction for the Scrum teams delivering them – plus CESAR's own portfolio platform from 2020.

- Contributed to the development of four production web applications across nine years and four client engagements, each in a different language stack – PHP (Yii), Python (Flask/Falcon), Ruby on Rails and JavaScript (Backbone/Marionette, EmberJS, VueJS).
 - Built and maintained CI/CD environments with Git/GitFlow, TeamCity, Jenkins, Ansible and HashiCorp Vault, enabling secure, repeatable and fully automated deployments.
 - Built and maintained the portfolio platform from 2020 – a Laravel 9 API exposing JSON:API contracts, with a Nuxt 2 front end added in 2022 – carried forward into the following roles.
 - Served as technical lead across four client projects with Scrum teams of 6 to 15 engineers, running sprint planning, code review practice and delivery commitments.
-

Technical Manager · Enterprise Java & Mobile

Jan 2009 – Jun 2013

CESAR (Centro de Estudos e Sistemas Avançados do Recife) · Recife, PE, Brazil

An enterprise Java web and mobile application built end to end, the CI/CD and Scrum tooling behind it, and a nationwide production platform maintained against live traffic.

- Built an enterprise web and mobile application end to end using Java EE/ME, Android, Apache Struts 2, Apache CXF, Spring, Hibernate, Oracle and Apache Tomcat.
 - Implemented a complete CI/CD environment (Subversion/Git, Maven, TeamCity, Tomcat) for automated builds and deployments.
 - Built a Scrum task-board integration for Mantis (PHP) that gave distributed remote teams shared sprint visibility.
 - Maintained a nationwide production web platform while shipping new features against live traffic.
-

Senior Software Configuration Management Engineer

Jan 2005 – Jan 2009

CESAR (Centro de Estudos e Sistemas Avançados do Recife) · Recife, PE, Brazil

Led the company-wide Software Configuration Management team through a formal CMMI 1.2 Level 3 appraisal, defining the SCM processes, tooling and automation adopted as company standards.

- Led a 10-engineer Software Configuration Management team through a successful formal CMMI 1.2 Level 3 appraisal, serving as a trained SCAMPI evaluator.
 - Defined and maintained company-wide SCM processes as SCM lead within the Software Engineering Process Group (SEPG).
 - Rolled out SCM processes across multiple concurrent projects using Rational ClearCase, ClearDDTS, CVS, Subversion, Mantis, Apache Ant and Lintbuild.
 - Built automation tooling and Mantis extensions (PHP, Shell) for defect tracking, requirements traceability and code review reporting, later adopted as company-wide standards.
-

Software Configuration Management Engineer

Oct 2001 - Jan 2005

CESAR (Centro de Estudos e Sistemas Avançados do Recife) · Recife, PE, Brazil

SCM process definition and automation for multi-site mobile device programs, contributing to CMM Level 2 certification and to a ~20% rise in client evaluation scores.

- Defined and implemented SCM processes for multi-site mobile device development projects using Rational ClearCase and ClearDDTS, contributing to the organization's CMM Level 2 certification.
- Raised client evaluation scores for SCM performance by approximately 20% by automating configuration management activities across roughly twelve projects.

Junior Software Engineer

Jan 2001 - Oct 2001

CESAR (Centro de Estudos e Sistemas Avançados do Recife) · Recife, PE, Brazil

The institute's first J2ME mobile development practice: 15+ applications shipped, including an internationally awarded game.

- Pioneered J2ME application development at CESAR, establishing the institute's first mobile development practice.
- Developed 15+ mobile applications, primarily games, for early Java-enabled handsets.
- Authored Sea Hunter, awarded Best Application from the Americas at the Asia Java Mobile Challenge.

Junior Software Engineer

Jun 2000 - Dec 2000

CESAR (Centro de Estudos e Sistemas Avançados do Recife) · Recife, PE, Brazil

Java web development: a J2SE WAP application for lottery game management, and an e-commerce portal supporting M.Sc. dissertation research.

- Developed a WAP application in J2SE for lottery game management.
- Built an e-commerce portal used to validate a team member's M.Sc. dissertation research.

EDUCATION

Federal University of Pernambuco (UFPE)

Mar 2000 - Aug 2002

M.Sc. in Computer Science

Specialization in Artificial Intelligence. Dissertation: "KAGENT: A Java API for Intelligent Agents in Mobile Devices" (advisor: Geber Lisboa Ramalho; available at <https://repositorio.ufpe.br/handle/123456789/2601>).

Artificial Intelligence · Multi-Agent Systems · Software Engineering

Federal University of Ceará (UFC)

Jan 1996 - Dec 1999

B.Sc. in Computer Science

CERTIFICATES

AI for Developers (54h)

2025-08

CESAR School

Certified ScrumMaster (CSM)

2017-10

Scrum Alliance

Zend PHP Certified Developer

2014-10

Zend Technologies, Ltd.

PUBLICATIONS

Software Configuration Management Diversity: A Commercial Case Study

2008-07

BCS-CMSG – The CMDB and CMS: the Powerhouse of Service Management

Second of two authors. Commercial case study on sustaining diverse software configuration management practices inside one organization, published while leading CESAR's company-wide SCM team.

Desenvolvendo o Projeto Conceitual de Jogos Wireless (Developing the Conceptual Design for Wireless Games)

2002-10

1st Brazilian Workshop in Games and Digital Entertainment (WJOGOS), SIBGRAPI 2002, Fortaleza, Brazil – pp. 141-144

Fifth of six authors. Conceptual design methods for wireless games, drawn from CESAR's early J2ME mobile game development.

Embedding J2ME-based Inference Engine in Handheld Devices: The KEOPS Case Study

2002

Proceedings of the First International Workshop on Ubiquitous Agents on Embedded, Wearable and Mobile Devices, Bologna, Italy

First author. Case study on embedding an inference engine in J2ME for resource-constrained handheld devices.

KSACI: A Handheld Device Infrastructure for Agents Communication

2002

Intelligent Agents VIII (LNAI 2333), ATAL 2001, Seattle, USA – Springer, pp. 423–435

First author. Communication infrastructure for agents running on handheld devices – built on the SACI framework, using KQML as the outer language and XML as the inner one, and demonstrated on early J2ME cell-phone emulators.

AWARDS

Best Application from the Americas – Sea Hunter

2002

Asia Java Mobile Challenge (SingTel, Optus and Sun Microsystems)

Sea Hunter, a J2ME mobile game written for early Java-enabled handsets at CESAR (Brazil), was named one of the Top 20 finalists selected from more than 1,000 entrants across 23 countries.
